

## **Processes:**

1. Timer that will be a countdown for your work time and break time.(Main Page)
2. Tasks – List of tasks that user can add to the system, so he knows what he has to work on(Statistics & Tasks page)
3. Login and sign up system that will allow users to save all the information and have access to it from multiple devices. (Login and Sign up pages)
4. Recent work statistics – This will allow users to track the activity under their profile that happened recently. The size of this list will be determined in the future.(Statistics & Tasks page)
5. Database that will be saving everything for users. It will allow them to save the tasks, so they don't forget about them, save the progress and previous results as well.(Will work on all pages in a certain way)

## **Login page:**

1. Sign in text on top of the page
2. Username field where user needs to enter the username(email) to enter his account
3. Password field where user needs to enter his password to enter his account
4. Login button that will check username and password if they are correct it will sign in the user
5. Text “Don't have an account? Sign up” with “Sign up” as a link to the Sign up page

## **Sign up page:**

1. Create an account text on top of the page
2. First name field where user needs to enter his first name
3. Last name field where user needs to enter his last name
4. Email field where user needs to enter his email address
5. Password field where user needs to enter his password
6. “Date of birth” text, as an indicator of what you need to enter in next field
7. Calendar field, where you need to either enter or just pick the date of birth
8. “Reason for creating a profile” text, as an indicator of what the next field will require you to choose.
9. Drop down field with 3 options that will indicate the purpose of using the app for that specific user.
10. Sign up button, that will check if all fields were used and if they were it will create the new account for user.
11. “Already have an account? Login” text with Login being the link to Login page

## **Statistics & Tasks:**

1. “Statistics & Tasks” text as the indicator of what page you're at
2. Timer – link that will allow you to enter the main page with the timer itself
3. Login – link that will allow you to enter the login page

4. **Previous Sessions** – Field where in future your recent work will be shown with some data in there.
5. **Tasks** – Field where you can see the tasks that you still need to work on, mostly works as a reminder.
6. **New task field** – Allows you to add a new task into the file. It will be saved and displayed in Tasks.

### **Main page:**

1. **“Pomodoro Timer”** – name of the application
2. **Login** – link to login page of the application
3. **Statistics & Tasks** – link to Statistics and Tasks page of the application
4. **Timer bar** with the amount of time displayed in the middle – This bar will be filling in with the time as a visual indicator of time that is left. When the time is over, the bar will be filled in completely
5. **Start button** – Allows you to start the timer with given settings
6. **Pause button** - Allows you to pause the timer if needed
7. **Reset button** – Allows you to restart the timer to basic settings given in the beginning
8. **Short break input field** – Setting field that you can use to set up a certain period of time for the short break
9. **Work time input field** – Setting field that you can use to set up a certain period of time that will be your work time on the specific task
10. **Long break input field** – Setting field that you can use to set up a certain period of time for the long break
11. **Task chosen field** – This field will be showing you what task you’re currently working on. It will be a drop-down menu that will show all the tasks that you added on Statistics& Tasks page
12. **Mark as completed task** – Indicator that will allow you to mark the current task as completed. It will allow you to remove the current task from the options shown for Task chosen field, so it will be saved in the system, but you won’t be able to pick it unless you make it active again on “Statistics & Tasks page
